ORAL SURGERY FOR THE GP
A “HANDS-ON” PRACTICAL APPROACH

Irvine, California | December 2-4, 2011

This course is designed for the general practitioner who wishes to perform his or her own surgery and who rarely refers cases to a specialist.

It is a step-by-step presentation of numerous minor surgical procedures that the dentist can and will confidently perform in the office when this hands-on workshop is completed. The participant will perform a large number of procedures utilizing anatomical specimens. The course will demonstrate techniques that have been utilized and updated successfully for over 30 years.

It is important to emphasize that this workshop does not present major Maxillofacial surgery such as osteotomies, fractures, condylectomies, rhinoplasties, etc. that are of no practical or clinical value to the GP. The surgical procedures that will be taught are the “bread and butter” variety, allowing the participant to refine and update all surgical skills.

This is a practical, nuts and bolts course.
Dr. Gaum demystifies surgical extractions and you will be utilizing the techniques taught come Monday morning.
– Dr. Robert Fraser

The Perio Institute has been educating clinicians for over 25 years with Hands-On Workshops. We are always looking for topics and instructors that will help our students on the Monday after the course properly diagnose, refer out or predictably perform the procedure necessary for their patient. The newest course offering is Oral Surgery for the GP taught by Dr. Lawrence Gaum.

Would you like to surgically remove impacted and non-impacted 3rd molars? Perform frenectomies, remove cysts and soft tissue tumors with confidence? This course will give you the skill and techniques to perform these and other procedures.

Respectfully,
PERIO INSTITUTE

Tracy O’Keefe
President

Everything You Wanted to Know about ORAL SURGERY and Were Brave Enough to Ask

- Performing a proper Examination, Assessment and Preparation of the Patient
- Surgical removal of cysts
- Surgical removal of soft tissue tumors
- Surgical removal of hyperplastic tissue
- Proper techniques for hemostosis
- Incision and drainage of infected tissue
- Frenectomies
  - Maxillary labial (diastema)
  - Mandibular lingual (ankyloglossia)
  - Maxillary labial (prior to fabrication of complete upper denture)
- Surgical removal of impacted and non-impacted 3rd molars
- Surgical removal of Tori (mandibular and palatal) Surgical exposure of impacted cuspids (pre-orthodontic treatment)
- Surgical removal of erupted molars
- Post-op considerations, including appropriate use of analgesics, antibiotics and sedatives
- The “Art” mandibular Block — a refreshing, new, successful approach to accomplishing Regional Anesthesia by blocking the 3rd division of 5th nerve

As a result of this workshop:
- Participants will learn:
  - the proper instrument for each surgical technique
  - the proper use of each instrument
  - proper surgical techniques
  - pre-operative patient assessment
  - post-operative considerations
- The GP will have the confidence and the skill to perform all of the surgical techniques taught in the workshop.

Oral Surgery will no longer be complicated nor a mystery.

Taking Dr. Gaum’s course gave me the training, experience and courage to do what we are suppose to do as dentists extract teeth. His courses allowed me to become proficient in wisdom teeth extractions and patient management. I now refer less than 1% of my extraction cases; those that I predict will be trouble. His course is one of the best investments of the over 1800 hours of courses I have taken.

– Dr. Neil J. Gajjar, DDS

Excellent course!
Dr. Gaum’s no nonsense approach and helpful tips improved my surgeries on Monday morning.
– Dr. Peter Fuzy

This course is a must for anyone wanting to take their oral surgery skills to the next level.
– Dr. Filippo Marchello

Course fee includes Dr. Gaum’s book at no additional cost.
A must for your professional reference library!
