Modern Theory and Practice of Dental Implantology

Friday, June 7, 2013
(6 hours CE/AGD Implant Lecture Credit)

Current trend in dental implant education lacks the background preparation, sometimes considered tedious to teach by many educators. Most courses may prepare a student for placing an implant in a dummy model but leave out critical information to avoid complications such as medical and pharmacological management, cone beam CT scan planning, ridge mapping, fluid and IV management, and management of medical emergencies that might occur during implant surgery.

Dr. Kaushesh has geared and planned his courses to not only comprehensively teach doctors unfamiliar but interested in dental implantology and fill in the knowledge gaps and blanks of even experienced practitioners. By attending this course the practitioners can expect to be competent and proficient in the following areas of Dental Implantology:

1. Practitioners will learn extensive management and prevention of medical emergencies in an dental implant practice. Complete protocols on management of patients who present with diabetes, cardiovascular complications and airway conditions will be discussed. A practitioner after attending the course will be competent in taking proper medical histories and scrutinize drug regimens our patients might be on. Practitioners will learn the “real story” behind bisphosphonate drugs and how to minimize risk of ONJ.

2. Practitioners will learn how to properly communicate with medical practitioners to obtain clearance for surgeries and maximize your implant success. The scenarios will be discussed when to have the medical doctors order and decipher blood tests such as Complete Metabolic profiles and HbA1c. You will be taught how to watch out for the most important lab values vital in success and failure of dental implants.

3. Practitioners will learn how to insert and maintain Intravenous access for fluid control and maintain a “life line”. All medications that should be in your crash cart — that are commonly used in medical management of emergencies in your office will be discussed “hands on” such as Dextrose, Midazolam, Atropine, Ephedrine and Lidocaine. Airway management will be discussed extensively.

4. Planning tools that you need in order to place implants safely will be discussed such as Cone Beam CT Scan, Ridge mapping and role of bone density, quality and quantity in implant success.

5. Practitioners will learn how many implants to place and where in order to maximize biomechanical outcomes of their treatments. You will be taught how to select the proper implant for a case and how patient force factors affect implantology.

6. Practitioners will become proficient in sputtering techniques and flap management.

7. Practitioners will learn how to place bone graft and membranes properly.

8. Practitioners will be given an introduction to sinus and block grafts.

9. Practitioners will learn how to use prefabricated and custom abutments for teeth and denture stability.

10. Practitioners will be taught how to take proper impressions for the implant crown and denture success.

11. Practitioners will learn how to manage implant complications such as premature exposure, bone loss and loss of connective attached tissue. Management of surgical and prosthetic complications will also be discussed in detail. Proper implant occlusion will be taught.

Hands on Training
Saturday & Sunday
June 8 & 9, 2013 (16 hrs. CE/AGD Implant Credit)
(both days will consist of hands-on training)

All of the objectives listed will be discussed in the lecture and will go into more detail in the hands on portion.

If you attend the entire weekend AND are an AGD member, you will receive 24 hours of Participation Credit in Implants. 24 additional hours of participation credit may be earned by presenting a clinical homework assignment after the course and presenting in October of 2013.

Practitioners will be taught how to properly communicate with medical practitioners to obtain clearance for surgeries and maximize your implant success. The scenarios will be discussed when to have the medical doctors order and decipher blood tests such as Complete Metabolic profiles and HbA1c. You will be taught how to watch out for the most important lab values vital in success and failure of dental implants.

The AGD-Nebraska is designated as an Approved PACE Program Provider by the Academy of General Dentistry. The formal continuing education programs of this program provider have been accepted by AGD for Fellowship, Mastership and membership maintenance credit. Approval does not imply acceptance by a state or provincial board of dentistry. The current term of approval extends from 1/1/2012 to 12/31/2013. Provider ID# 219315

FAGD/MAGD Approved
1/1/2012 to 12/31/2013
