6 lecture hours. AGD Subject Code 750.

---

This core course is free for current AGD members, but registration is required to gain acceptance into the course. There will be no onsite registration and you will be turned away from the venue. There is limited attendance to the course. Your credit card will be taken and any cancellation within three weeks of the course will have a \$75 charge. AGD reserves the right to cancel or alter the course. The exact location of the course will be emailed within one month of the course. This is the only form of communication for the location of the course.

## “Dental Management of the Medically Compromised Patient: What I really need to know”

---

### **COURSE OBJECTIVES**

This course provides an evidence-based overview of the dental management of medically compromised patients commonly encountered in clinical practice. Emphasis is placed on understanding the pathophysiology and pharmacologic management of systemic conditions—including neurological, cardiovascular, and endocrine disorders—and their implications for dental care. Participants will review how commonly prescribed medications influence oral health, dental treatment planning, and the risk of drug interactions. Practical strategies for modifying dental treatment, minimizing medical risk, and managing potential medical emergencies in the dental setting will be discussed. The course aims to enhance clinicians’ confidence in safely treating patients with complex medical histories.

### **LEARNING OBJECTIVES**

- Review the pathophysiology and pharmacologic management of common systemic diseases relevant to dental practice.
- Recognize the oral manifestations and dental implications of medications used to manage neurological, cardiovascular, and endocrine disorders.
- Identify clinically significant drug interactions and adverse drug reactions relevant to dentistry.
- Implement appropriate modifications in dental treatment planning and patient management for medically compromised individuals.
