PERIO SURGERY FOR THE MODERN DENTAL PRACTICE

Toronto, ON • April 18 & 19, 2014

WORKSHOP INSTRUCTOR

Dr. Kent Spillman

Dr. Kent Spillman graduated from Creighton University Dental School. He obtained his certificate in Periodontics from the University of Iowa. He also holds a fellowship in implantology from the University of Texas.

Dr. Spillman lives in Denver Colorado and has been a practicing Periodontist since 1981. He has taught numerous classes in periodontal plastic surgery and periodontal microbiology. He has extensive knowledge and lectured extensively on laser therapy in periodontology. Dr. Spillman has been voted as one of Denver’s top Periodontists the last four years. He is a member of the American Dental Association and the American Academy of Periodontology. He recently became a Graduate Gemologist and enjoys this hobby in his spare time. Dr. Spillman enjoys teaching general practitioners how to handle periodontal problems in their practice.

PERIO SURGERY FOR THE MODERN DENTAL PRACTICE

Presented by the Perio Institute, Inc.

A 2-day “Hands-On” Workshop:

TORONTO, ON
APRIL 18 & 19, 2014

An intensive “Hands-On” course designed for dentists who want to improve their Perio skills.

Visit www.perio.com for more information.
This exciting new class was designed to teach and promote awareness of periodontal disease that is seen in the dental office every day. The Perio Institute has been teaching mild to moderate perio surgical skills to the general practicing dentist for over twenty years. But this course offers a refreshing new approach to the traditional and conventional treatment planning and options on the first day and adds the value of a more modern methodology on the second day.

General practitioners are enthusiastic about learning, diagnosing, and treating their patients with mild to moderate periodontal disease. Attending this class will give you the knowledge and skills to recognize and address periodontal problems and offer patients a predictable solution. Taught by a Periodontist, this course demonstrates periodontal disease and allows the general practitioner to identify the trouble and make an educated decision to treat or refer the patient to a specialist. The hands-on experience, executed on pig jaws and anatomical models, provides the participants with confidence and a better understanding of the skill set necessary to achieve a predictable outcome. During the 2-day workshop you will be instructed on instruments, periodontal plastic surgery, oral medicines, soft and hard tissue augmentation, root planning, antibiotics and laser therapy. Upon completion of this extensive two day learning experience, you should have a confident understanding and the necessary skills to build on and add periodontal therapy to your practice.

Why Our Workshops Are Successful

- Each procedure is explained in detail using our instruction book and slides. (You get to keep the book.)
- After each explanation you do the actual procedures using frozen pig jaws. (We supply all the instruments.)
- All procedures are taught by licensed periodontists who understand your problems.
- Attendance is limited to ensure personal attention by the instructors.
