

BOTOX[®] & PHOTOGRAPHY FOR DENTISTS

Theory & Hands-On Live Models

Dr. Tarek Chbat

MD, FRCPC,
Anesthesiologist

Dr. David Goldshaw

DDM, LBIST, BDT UK,
OMS

Course Outline

More and more dentists show a high demand in administering neurotoxins as part of their dental procedures. This comprehensive course is designed for beginners and advanced dentists who are ready and comfortable to add neurotoxins to their practice immediately after completing this course. During the course, we will cover indications of neurotoxins based on the RCDSO regulations and guidelines.

Dental photography is a key element in proper documentation and good case presentations. Dr. David Goldshaw will review the special techniques for capturing the ideal photos to increase case acceptance during treatment planning and for proper documentation.

Botulinum Toxin

- Introduction to neurotoxins
- Facial anatomy relevant to perioral area
- Types of available neurotoxins
- Pharmacology and physiology of neurotoxins
- Application and indications for neurotoxins in dentistry (TMJ disorders including myofascial and arthrogenic disorders, bruxism, trismus, masseter and temporalis hyperactivity, headaches, sialorrhea and salivary secretory disorders, facial nerve palsy, facial pain and trigeminal neuralgia)
- Contraindications, Side effects & Management of complications

Photography

- Explain the first disinfectable camera (Shofu Eye Special C-IV) for dental treatment planning and proper case presentation
- Learn the 9 uses of this special camera from face, standard, surgery, mirror, low-glare, whitening, tele-macro, video and isolate-shade
- Using a Wi-Fi card, easily transfer images to your computer, laptop or iPad
