DR. DAVID ISEN

David's dental clinic in Toronto, Sleep For Dentistry, is anesthesia-based, treating patients who require intravenous sedation or advanced techniques in local anaesthesia. Many of these people have special medical needs or are dental phobic.

David has given over 400 presentations around the world on topics related to the management of medical emergencies in healthcare settings, local anesthesia for dentistry and the use of sedation in dentistry. He has lectured for many university continuing education programs, dental societies and conventions.

He is the author of numerous articles, has peer-reviewed papers for a variety of dental journals and as well has acted as a consultant for dental and pharmaceutical companies.

6 lecture hours. AGD Subject Code **134**.

This core course is free for current AGD members, but registration is required to gain acceptance into the course. There will be no onsite registration and you will be turned away from the venue. There is limited attendance to the course. Your credit card will be taken and any cancellation within three weeks of the course will have a \$75 charge. AGD reserves the right to cancel or alter the course. The exact location of the course will be emailed within one month of the course. This is the only form of communication for the location of the course.

Medical Emergencies In The Dental Office

COURSE OBJECTIVES

Medical emergencies are rare in dental offices since dental treatment is generally safe. However, at times, the unexpected occurs. Emergencies do occur and so, it is incumbent on practitioners to be prepared for these potential events. Our patients rely on this. Because dentists and their teams are not practiced in medical emergency protocols, and these events are infrequent, remembering the correct steps to take is difficult.

This full-day course is broken down into four sections. In the first, we will look at medical history and vital sign assessment. This will give the participant an understanding of how to predict which of our patients are medically risky to treat and how to minimize those risks.

The second part of this talk will present current basic life support protocols and how to incorporate these protocols into a dental office team environment. The use of an AED will also be highlighted. A method to organize our thinking during an emergency (P-CAB-D) will be presented.

In the third section of this lecture, medical emergency drugs and their use will be presented. Which drugs are appropriate and required in a dental office will be comprehensively discussed.

And finally, specific emergencies and how to respond to them will be presented. Syncope, asthma, angina, myocardial infarction and cardiac arrest, to name a few will be highlighted.
