"Pulling a tooth out? What next?"

COURSE OUTLINE

This comprehensive lecture is designed for dental professionals seeking to enhance their expertise in treatment planning for tooth replacement using dental implants. The course will cover the fundamental principles and advanced techniques necessary for successful tooth replacement with dental implants. Participants will delve into diagnostic methodologies, including patient assessment, imaging technologies, and the evaluation of bone quality and quantity. The course will emphasize the importance of interdisciplinary collaboration and the integration of prosthodontic, periodontic, and surgical considerations in developing a cohesive treatment plan.

Key Topics:

- Comprehensive patient evaluation and risk assessment (Mental, Physical and Local)
- Radiographic and digital planning tools (2D and 3D)
- Site preparation and bone augmentation techniques (socket grafts, GBR, sinus grafts, soft tissue surgery)
- Implant placement protocols (free hand and guided)
- Prosthetic options and considerations for single-tooth, partial, and full-arch restorations (custom titanium abutments, zirconia, milled restorations, lab communication)
- Through case studies, interactive discussions, and evidence-based practices, participants will gain the knowledge and confidence to create personalized, effective treatment plans that maximize patient outcomes and satisfaction.

HIOSSEN IMPLANT

Dr. Joshua Shieh, BDS, MDS
