Alter the Tooth Life Cycle

COURSE OUTLINE

In this hands on course you will begin the exploration of Minimally Invasive Dentistry as it relates to posterior indirect restorations. The traditional approach we all learned early on in our careers will be challenged as we look to take the approach of "prep less and bond more". Advanced Adhesion techniques and materials can help to minimize the removal of healthy tooth structure and take your restorations to the next level. We will perform non-retentive preparations and dentin protection strategies together with temporization techniques you can implement in your practice.

Learning Objectives:

- Understand the Benefits of Immediate Dentin Sealing
- Raise deep Sub-Gingival Margins to Supra-Gingival Margins
- Tackle the challenge of Temporizing Non-Retentive Preparations
- Understand management of cracked tooth syndrome

Dr. Troy Schmedding is a 1993 honors graduate of the Arthur A. Dugoni School of Dentistry in San Francisco, California. Troy maintains a private practice in Walnut Creek, CA focusing on aesthetic and functional dentistry. Dr. Schmedding was a Course Director at the University of the Pacific and has published numerous articles on the topics of restorative materials and protocol driven Dentistry. An Accredited member of the American Academy of Cosmetic Dentistry, he lectures both nationally and internationally on Aesthetic, Restorative and Adhesive Dentistry. Dr. Schmedding shares his knowledge with numerous dental manufacturers helping to stimulate new product development for our profession.
