Creative problem solving—Economic solutions

Mark Malterud, DDS

Dr Malterud is a 1983 graduate of the University of Minnesota School of Dentistry and practices General and Family dentistry in St. Paul along with being an adjunct faculty member of the University of Minnesota Continuing Dental Education Department. His commitment to dental education not only as a student but also as an educator has him personally attending well over 100 hours of dental continuing education each year.

Learning objectives:

1. The participants will be introduced to a new concept of fabrication of an in office laboratory composite resin crown that their team can accomplish in a very short period of time.
2. The participants will understand the many situations where the composite resin crown can help them provide their patients with a very viable lower cost alternative to their current crown techniques.
3. The economic viability of a resin crown will be discussed as to how it can be a better alternative, in many instances, over a CAD/CAM restoration.
4. The participants will understand the entire process from diagnosis to fabrication. They will be able to return to their practice tomorrow, ready to work with their team and delegate the creation of new solutions for their patients.
5. Hands on participants will actually have an opportunity to fabricate a crown from a prepared tooth on special models so that they will get the full experience of the process.

AGD Subject Code 250 - Participation 7 CE
