Advanced Fixed Prosthodontics and Functional Occlusion Residency

The management and understanding of the role of occlusion as it applies to our clinical dentistry is of vital importance for the long term success of our dentistry. Yet, most clinical dentists find this topic complex, confusing and difficult to integrate into private practice.

This program will address the various topics that are essential to understand the biologic principles required to develop a functional occlusion for our patients for long term stability, comfort and physiologic function.

TOPIX TO BE COVERED:
- Terminology defined: Centric Relation, Vertical Dimension of Occlusion, Centric Occlusion, Maximal Inter cuspal Position, Hinge Axis and others
- Importance of Centric Relation position
- Various options in obtaining accurate repeatable Centric Relation Bite Records
- Treatment options to determine the Vertical Dimension of Occlusion
- Guidelines for Masticatory function
- Posterior determinants of occlusion and anterior guidance considerations
- Use of facebow and articulators; is it required, when, where, what type and how?
- Management of parafunctional habits of bruxism and grinding
- Management of attrition, abrasion, erosion and abrasion as etiologies to occlusal instability and breakdowns
- Splint therapies; when, which arch, hard or soft, what type of occlusion?
- Restoration of the worn dentition
- Full mouth reconstruction protocol, sequence of steps from start to finish
- TMD considerations to evaluate stability prior to initiation of treatment
- Various occlusion therapies, theories and applications to clinical dentistry
- Implant occlusion; single implant crowns, implant retained removable prosthesis, and implant fixed prostheses
- Supported fixed hybrid prosthesis, implant fixed porcelain prosthesis
- Implant protected occlusion versus occlusion for natural dentition
- Clinical treatment on your patients
- Physiologic occlusion vs non-physiologic occlusion vs therapeutic occlusion
- Kois Deprogrammer used as a diagnostic tool as well as a guide for occlusal equilibration
- Perio-restorative interface
- Tooth preparation system
- Bone sounding principles
- Margin location based on biologic width to maximise aesthetics while minimising biologic complications
- Comprehensive rehabilitation
- Excessive gingival display or gummy smile: diagnostic and treatment protocols
- Algorithm to sequence a full mouth rehabilitation
- Transitional bonding as a diagnostic tool to test an increase in VDO

Module 1
DECEMBER 2-3, 2016
Module 2
JANUARY 20-21, 2017
Module 3
MAY 12-13, 2017
Module 4
JUNE 23-24, 2017

Breakfast & Sign-in
8:30am
Lecture
9:00am – 5:00pm
Cancellation must be received at least 21 days prior to course for refund.

FOR ONLY
$13,950 +HST

TREAT YOUR OWN LIVE PATIENTS
(Early bird deadline September 30th, 2016 receive $1,000 OFF)
* AGD members get $100 discount
CE Credits 56

LOCATION:
Toronto Dental Hygiene College
28 Vanley Cres.,
Toronto
